

## GARDEN THE EAZI WAY!

The **eazitools** gardening range offers an innovative alternative to the traditional foot bar. Featuring a cast aluminium stirrup foot hole, with slip-resistant grippers and ergonomic shaft design, the **eazitools** gardening range has been designed to be both safer and easier to use than traditional garden tools.

## WHAT MAKES EAZITOOLS DIFFERENT?

### SOFT-FEEL D-HANDLE

Easy to hold D-handle with soft grip for added comfort

### TUBULAR ALUMINIUM SHAFT

Ultra strong yet lightweight  
Specially shaped and tapered to maximise strength at lower end of the tool

### ERGONOMIC DOUBLE CRANKED SHAFT

Follows the natural contours of the user's leg allowing foot to sit comfortably in the stirrup  
Avoids the restrictions of a traditional straight shaft  
Maximises leverage reducing strain on user's muscles, in particular the back area

### CENTRALISED STIRRUP FOOT TREAD

Reduces slipping and balances foot better  
Central foot placement stops tipping of tool head providing more accurate straight digging  
Delivers more digging power with less strain on the user's back

### HEEL ROLL FULCRUM

Unique roll action to help lever out difficult roots and hard to dig soils

### HEAT TREATED STAINLESS STEEL TOOL HEAD

Superior hardened steel offering strength and durability  
Rust resistant

# EAZITOOLS RANGE

## BORDER

This range is lightweight, compact and stylish and designed to be used in borders and smaller, tighter areas.

## DIGGING

Bigger than the border range, these tools have been designed with the taller gardener in mind. Larger tool heads make them ideally suited to digging bigger areas.

## HEAVY DUTY

Even bigger than the digging range, the **eazitools** heavy duty tools are ideally suited to the professional gardener or contractor as they offer maximum performance and are easy and comfortable to use for sustained periods of time.

## SPADE

The perfect digging partner - the **eazi-spade** offers maximum power whilst reducing the strain on the user's muscles.

What instantly strikes you about this tool is its lightness. Using high quality aluminium we have been able to achieve lightness and strength.

The **eazi-spade's** unique stirrup design eliminates the risk of your foot slipping off the side of the spade head.

## FORK

Additional to all the features of the **eazi-spade**, the **eazi-fork** has a specially designed tine configuration. The two middle tines are set slightly back to help cup root balls better.

When combined with the heel roll fulcrum this tool digs out roots far easier than conventional garden forks.

## WEEDER

The new and innovative **eazi-weeder** has been designed specifically to remove common garden weeds from difficult to reach borders and lawns.

Small and compact in design, it is easy to manoeuvre around plants and its four-tine structure efficiently cups root balls, offering minimal soil disturbance.

The **eazi-weeder** is a handy addition to anyone's garden shed.

## EDGER

The unique stirrup design really comes to the fore with this tool. The stirrup centralises the user's foot providing straight downward pressure unlike conventional edges which tilt the blade to whichever side the user's foot goes onto, creating an imbalance.

With the **eazi-edger** you are guaranteed a straight, crisp edge every time.
